

**Sayı:** 17812098-TİM.AKİB.GSK.SAN.2024/254-2797  
**Konu:** AB Çelik Korunma Önlemi

Mersin, 03/06/2024

**Sayın Üyemiz,**

T.C. Ticaret Bakanlığı İthalat Genel Müdürlüğü'nden alınan bir yazıda, Avrupa Birliği tarafından bazı çelik ürünleri ithalatına karşı uygulanan korunma önlemine ilişkin bir gözden geçirme Soruşturması başlatıldığı, söz konusu gözden geçirme çerçevesinde mevcut önlemin devamı ile kota kullanım oranları, bu kotaların kullanım şekillerindeki değişikliklerin gerekli olup olmadığının inceleneceği hatırlatılmaktadır.

Bu defa, AB tarafından Dünya Ticaret Örgütüne yapılan ve bir örneği ekte yer alan bildirimde önlemin 30 Haziran 2026 tarihine uzatılmasına karar verildiği ifade edilmektedir. Ayrıca, 2023 yılı ithalatına göre gelişmekte olan ülke muafiyetlerinin güncellendiği ve ülkemizin 7 ve 24 kategorilerinde önleme tabi hale geldiği belirtilmektedir.

Diğer taraftan, spesifik kota belirlenmiş ülkelerin, kota döneminin son çeyreğinde kalan kotalara erişim rejimlerinde küçük ülkeler lehine değişiklik yapıldığı ifade edilmektedir.

Son olarak, Komisyonun, önlemin etkinliğini ve geleneksel ticaret akışlarının korunmasını sağlamak amacıyla iki ürün kategorisinde (Kategori 1 ve 16), önlemin işleyişinde düzenleme yapılmasının gerekli olduğu sonucuna vardığı bildirilmektedir. Bu çerçevede, her çeyrekte başlangıçta mevcut olan kota hacmi üzerinden, kalan kotanın tek bir ülke tarafından kullanılacak azami sınırının %15 olarak belirlendiği ifade edilmektedir.

Bilgilerini rica ederim.

**Dr. Osman ERŞAHAN**  
**Genel Sekreter Yrd.**

**NOTIFICATION PURSUANT TO ARTICLE 12.1(C)  
OF THE AGREEMENT ON SAFEGUARDS (EXTENSION)**

**NOTIFICATION PURSUANT TO ARTICLE 9, FOOTNOTE 2  
OF THE AGREEMENT ON SAFEGUARDS**

EUROPEAN UNION

*Certain Steel Products*

*Supplement*

The following communication, dated and received on 28 May 2024, is being circulated at the request of the delegation of the European Union.

Pursuant to Articles 12.1(c) and Article 9 footnote 2 of the Agreement on Safeguards, the European Union ('the Union') hereby notifies to the Committee on Safeguards its proposal to extend a safeguard measure on imports of certain steel products. The Union also notifies proposed adjustments to the measure following a review of its functioning. This notification contains all pertinent information relating to the proposal to extend the measure and the proposed adjustments, in accordance with Article 12.2 of the Agreement on Safeguards, and an offer of consultations pursuant to Article 12.3 of the Agreement on Safeguards.

**1. Precise description of the product involved**

The product concerned is certain steel products belonging to the 26 product categories listed in **Annex I** to this Notification.

**2. Information relating to the extension of a safeguard measure**

**i. Evidence that the industry concerned is adjusting and that the safeguard measure continues to be necessary to prevent or remedy serious injury.**

Pursuant to Article 7, paragraphs 2 and 3 of the Agreement on Safeguards, a safeguard measure can be in place for a maximum duration of 8 years. The Agreement also foresees that a measure originally imposed cannot last more than 4 years, unless the competent authorities of the importing Member have determined that the safeguard measure continues to be necessary to prevent or remedy serious injury and that there is evidence that the industry is adjusting. The EU safeguard measure has been in place for a period of almost 6 years.

*Evidence that the safeguard measure continues to be necessary to prevent or remedy serious injury or threat thereof*

To determine whether the safeguard measure continues to be necessary to prevent or remedy serious injury or threat thereof and whether the industry is adjusting, the European Commission ('the Commission') undertook a comprehensive analysis of a broad set of data from multiple sources.

The Commission assessed, inter alia: the evidence provided by the Union industry in their questionnaire replies and written submissions, the information provided by interested parties (users, importers, exporting producers, and their associations, and exporting country governments) in their written submissions, as well as information available to the Commission including statistical databases and relevant publications on the steel sector.

To consider the economic situation of the Union industry, the developments of imports and other relevant data, the Commission assessed the data of the period 2021-2023 ('the period considered').

<b>Table 1 - Production, production capacity, capacity utilisation, stocks</b>			
in 000 tonnes	<b>2021</b>	<b>2022</b>	<b>2023</b>
Production volume of the product concerned	178 257	158 704	154 158
<i>index 2021 = 100</i>	<i>100</i>	<i>89</i>	<i>86</i>
Production capacity for the product concerned	231 509	229 881	230 139
<i>index 2021 = 100</i>	<i>100</i>	<i>99</i>	<i>99</i>
Capacity utilisation	77,00%	69,04%	66,98%
Stocks	32 082 625	30 434 986	31 214 413
<i>index 2021 = 100</i>	<i>100</i>	<i>95</i>	<i>97</i>
<i>Source: Industry data and questionnaire replies</i>			

Over the period considered, the production volume of Union producers steadily decreased by -11% in 2022 and by -14% in 2023, when compared to 2021. Production capacity remained stable throughout the period and, thus, capacity utilisation followed a declining trend, reaching a very low level of 67% in 2023. Lastly, stocks went down by -5% in 2022 and by -3% in 2023 as compared to the year 2021.

<b>Table 2 - The Union consumption, domestic sales and market share</b>			
	<b>2021</b>	<b>2022</b>	<b>2023</b>
Consumption in 000 tonnes	161 072	148 065	139 207
<i>index 2021 = 100</i>	<i>100</i>	<i>92</i>	<i>86</i>
Domestic sales in 000 tonnes	127 188	116 462	111 165
<i>index 2021 = 100</i>	<i>100</i>	<i>92</i>	<i>87</i>
Market share in %	79,0%	78,7%	79,9%
<i>Source: Industry data and questionnaire replies</i>			

Consumption in the Union market started decreasing in 2022 (-8%), and this trend continued in 2023 (-14%) when compared to the year 2021. The evolution of domestic sales volume by Union producers followed a very similar trend during the period considered (-8% in 2022 and -13% in 2023 respectively when compared to 2021). During the period considered, the market share of the Union industry remained rather stable, first declining by 0.3 percentage points in 2022 and then increasing by 0,9 percentage points in 2023, compared to 2021.

<b>Table 3 - Unit sales price, profitability, cash flow and return on capital employed</b>			
	<b>2021</b>	<b>2022</b>	<b>2023</b>
Unit sales price (EUR/tonne)	914	1 230	1 028
<i>index 2021 = 100</i>	<i>100</i>	<i>135</i>	<i>113</i>
Profitability (% turnover)	9,4%	10,3%	0,3%
Cash flow (million EUR)	5 024	10 696	7 881
<i>index 2021 = 100</i>	<i>100</i>	<i>213</i>	<i>157</i>
Return on capital employed (%)	25,2%	22,5%	-2,2%
<i>Source: Industry data and questionnaire replies</i>			

The unit sales price of the EU industry increased by 35% in 2022 and by 13% in 2023 when compared to 2021. Cash flow increased by 113% in 2022 and 57% in 2023 when compared to 2021. Return on capital employed decreased slightly in 2022 and reached negative figures in 2023 (-2.2%).

The increase in prices and post-COVID recovery drive turned the Union industry into profit-making in 2021 (9.4%) with profits slightly increasing in 2022 (10.3%). In 2023, the profitability sharply declined, reaching only a 0.3% profit.

<b>Table 4 - Employment</b>			
(FTE)	<b>2021</b>	<b>2022</b>	<b>2023</b>
Employment	180 958	181 913	179 867
<i>index 2021= 100</i>	<i>100</i>	<i>101</i>	<i>99</i>
<i>Source: Industry data and questionnaire replies</i>			

Employment remained stable throughout the period considered, with a 1 % decline in 2023 when compared to 2021.

Based on the above indicators, the Commission concluded that the state of the Union industry had deteriorated between 2021 and 2023 and that it was in a fragile situation at the end of the period considered.

A further analysis of the evolution of the economic indicators undertaken at the level of product family (flat, long and tubes), confirmed the overall assessment.

The Commission also analysed the evolution of a number of other factors. Considering the degree of global overcapacity, the high number of trade measures, including Trade Defense Instruments across multiple jurisdictions, the evolution of exports and domestic consumption in the main steelmaking countries and the existing market outlooks, the Commission concluded that should the safeguard lapse, imports into the Union would likely increase. This would inflict additional import pressure on the fragile Union industry and hence, would likely cause serious injury. Therefore, the Commission concluded that the measure continued to be necessary to prevent or remedy serious injury to the Union industry.

#### *Evidence that the Union industry is adjusting*

The Union industry documented numerous measures to improve competitiveness in the current challenging market conditions. Since 2021, the Union industry continued implementing a number of restructuring measures, such as closing down less efficient or underutilised facilities. This was confirmed by the capacity data provided in the questionnaire replies, which shows a slight decrease in production capacity. The OECD Steel Committee data also aligned with this information, reporting that in the period 2018-2023 capacity in the Union had gone down by 5.2 million tonnes. In connection to this type of adjustment, in April 2024, one of the largest Union producers announced an upcoming significant reduction of capacity of around 2.5 million tonnes in its largest production site. Thus, the Union industry undertook continuous and significant efforts to adjust to market conditions.

In addition, Union producers have also documented a variety of other adjustments to improve competitiveness, such as expanding the product portfolio, often with higher value-added products and improving process efficiency and plant modernisation. In this regard, the efforts of the Union steel industry have been concentrated in improving energy efficiency, also with a view to complying with the EU emissions requirements.

Therefore, the Commission concluded that the evidence showed that the Union industry has continued to adjust during the period considered.

#### **ii. Reference to the WTO document that notified the initial application of the measure.**

The original measure was notified on 7 February 2019 ([G/SG/N/8/EU/1/Suppl.1](#) - [G/SG/N/10/EU/1/Suppl.1](#) - [G/SG/N/11/EU/1/Suppl.2](#)).

**iii. Duration of the measure from initial application till the date at which it will be extended**

The initial safeguard measure was applied from 19 July 2018 until 30 June 2021. In July 2021, it was extended for three years, until 30 June 2024. The measure will be extended until 30 June 2026.

**iv. Precise description of the measure in place prior to the date of extension**

The latest version of the measure in place can be found in the European Union's notification of 30 May 2022 ([G/SG/N/10/EU/1/Suppl.15](#) - [G/SG/N/11/EU/1/Suppl.10](#)).

**3. If the final measure replaces a provisional measure, or if a final measure is extended, a Member is encouraged to provide a written description of any part of the imported product that will no longer be subject to the measure.**

The extended measure does not introduce any changes to the product scope.

**4. Description of the proposed measure**

The proposed measure consists of a Tariff-Rate Quota ('TRQ') available per product category, out of which, an out-of-quota 25% duty applies from 1 July 2024 to 30 June 2026.

The Commission is proposing to include Mozambique within the scope of the safeguard measure as from 1 July 2024 due to the expiry of the temporary exclusion of Mozambique from the application of safeguard measures defined in the EU-Southern African Development Community Economic Partnership Agreement.

The Commission also proposes to introduce some adjustments to the ongoing safeguard measure. These are the following:

**4.A Update and modulation of access regimes of countries having a specific quota to the residual quotas in the last quarter of the year to avoid crowding out smaller countries**

The measure continues to allow access to the volumes in the residual quota in the last quarter of a safeguard year to countries having previously exhausted their respective country specific quotas before the end of a safeguard year. The different access regimes applied so far ensure that the additional volumes that some countries having a country specific quota may export through the residual quotas under this system do not unduly crowd out countries exporting through the residual quotas exclusively.

The Commission assessed whether, based on the most recent data available, crowding out in the residual quota by countries having exhausted their country specific quota had taken place, on the basis of import data and quota use per origin and category from 1 April 2023 until 31 March 2024.

Based on that assessment, the Commission considered that the access regimes should be simplified to ensure predictability to market operators and to prevent any potential crowding out in the future. Accordingly, the Commission considered that the functioning of the measure should be modulated by allowing two regimes, instead of the current three.

The first regime, 'no access' would apply to those categories where the average use of the residual quota in a given category has been very high. The second regime, 'access', would apply to the other categories and it would allow access in the last quarter of a safeguard year (April-June) to residual quota volumes that have not been used on average by the incumbent exporting countries under the residual TRQ<sup>1</sup>. In a few categories a special regime continues to apply. The result of this adjustment is the following (**Annex III**):

---

<sup>1</sup> Volumes accessible in the last quarter are calculated over the TRQ initially available at the beginning of a quarter, i.e. not including potential carry-over of previously unused quotas.

- No access: 3B, 14, 16, 20, 26
- Access: 2, 3A, 4A, 5, 6, 9, 10, 12, 13, 15, 18, 19, 21, 22, 24, 25B, 27, 28

The categories for which this system does not apply (in line with the principles applied in the previous functioning review) are the following:

- Special regime: 1 and 4B.

The current regime that grants access to the residual quota in the last quarter to countries holding a country specific quota with a 30% cap per exporting country continues to be appropriate in order to ensure sufficient variety of sources of supply while avoiding crowding out effects through excessive additional imports beyond traditional trade flows.

- Global administration: 7, 8, 17, 25A.

The possibility to access the last quarter is not applicable, as there are no countries exporting under a country-specific quota.

#### **4.B Adjustment to improve the effectiveness of the measure in certain residual TRQs**

The investigation confirmed that there had been notable changes in the pattern of import flows into the Union, and that such changes have had significant effects on the functioning of the safeguard measure.

Recent market developments resulted in a significant decrease of exports of traditional suppliers to the Union under the residual quotas in some categories, while exports from new countries of origin have increased substantially in a short period of time under the same residual quotas. This change of trade flows has created a series of negative effects to the functioning of the measure in some categories, as it will be explained below. The Commission also established that the surge of imports from certain new origins was related to growing overcapacity in certain regions as well as to the significant pressure exerted by a strong increase in Chinese exports to certain markets.

As a result, the Commission concluded that an adjustment to the functioning of the measure was necessary in two product categories to ensure its effectiveness and the preservation of traditional trade flows. The adjustment will take the form of a 15% cap per single country under the residual TRQ over the TRQ volume initially available in each quarter. The grounds for that adjustment are described below:

##### *a. Product category 1 – Non alloy and other alloy hot rolled sheets and strips*

Product category 1 (hot-rolled flat products, 'HRF') is, in overall terms, a very important product category under the safeguard measure for various reasons. It consistently represents, by far, the largest share of imports (8.5 million tonnes in 2023) accounting for 31% of total imports under the measure in 2023. It also represents 34% of the total production of the Union industry and around 25% of its domestic sales in terms of volume. This category has many uses, and it is considered as a sort of commodity, and it is therefore particularly sensitive to price changes. HRF can be used as a final product in construction or automotive amongst others, but it is also used as input for producing further downstream products. Therefore, given its weight over the total Union production of the product concerned and its interrelation with several other product categories, the developments in this category are particularly relevant for the effectiveness of the safeguard measure.

Due to the recent surge of imports from certain new origins, the residual TRQ in this category has been consistently exhausted on the first day of the quarter for several consecutive quarters. This has created an imbalance on the market throughout the remainder of those quarters by making available very large amounts immediately, thus generating substantial import pressure.

Import pressure is particularly acute in this product category as imports continued to gain ground despite an overall substantial drop in steel consumption in the Union. In fact, the market share of imports in this product category reached 30% in 2023, substantially above the average for the product concerned as a whole.

In order to bring about more stability to the market in this important product category and hence ensure that the effectiveness of the measure is not undermined by market developments, while avoiding undue crowding out of traditional suppliers, the Commission determined that an adjustment was appropriate.

Based on the above, the Commission considered that imposing a limitation to the maximum volume that one single country can export under the residual TRQ on a quarterly basis was the most appropriate solution.

After careful consideration of all the interests at stake, including that of the exporting countries affected and their Union users, the Commission considered that a 15% cap per single country over the TRQ volume initially available in each quarter is appropriate.

This level of cap ensures, on the one hand, that import penetration on the first day of the quarter would be limited in volumes under the residual TRQ, hence reducing the import pressure on the market. On the other hand, it will allow the most affected exporting countries to still export relevant volumes, above their historical trade flows prior to the safeguard and generally, also those volumes exported on the first years under the safeguard measure. In addition, it protects the interests of those Union users and exporting countries that had been consistently crowded out.

*b. Product category 16 – Non alloy and other alloy wire rod*

In addition to product category 1, the Commission also found that a change in the pattern of imports was disrupting the balance of origins in the residual TRQ of product category 16 thus negatively impacting the functioning of the measure. In addition, in this category, the residual TRQ started to be filled in the first days of the quarter in two of the last three quarters assessed.

The Commission's assessment showed that, in general, until the quarter July-September 2023 there were a diversity of exporting countries that were regularly exhausting the residual TRQ. The import share per country varied depending on the quarter.

In designing the definitive safeguard measure, and in the different functioning reviews, the Commission sought to preserve traditional trade flows in terms of volumes and origins. The objective of preserving traditional volumes was achieved by calculating TRQs based on past trade flows, while the objective of preserving traditional origins was achieved by establishing country specific quotas.

However, smaller traditional supplying countries that did not qualify for a country specific quota in a given product category were potentially exposed to sudden and abrupt changes in the trade flows within their respective residual TRQs. This was precisely the situation faced by certain exporting countries in product category 16 and which prevented them from continuing exporting meaningful volumes, to their detriment and that of their Union users.

As of the quarter July-September 2023 the composition of origins changed abruptly within the residual TRQ in this product category, with several new origins suddenly exporting very large amounts in the last three quarters. This resulted in a massive reduction of free-of-duty imports from all other exporting countries which used to have a stable presence on the Union market. In fact, some of them virtually stopped exporting under this TRQ.

Therefore, this aggressive penetration into the Union market from several new origins has clearly crowded out other origins that exported regularly under this TRQ by substantially reducing their presence or almost eliminating it completely.

Based on the above findings, the Commission considered that a limitation of the maximum volume of free-of-duty imports per country of origin and per quarter was the most appropriate action to restore a more balanced distribution of origins in this residual TRQ, and hence, ensure a better

functioning of the measure. The Commission considered it appropriate to set this limitation at 15% of the TRQ initially available at the beginning of each quarter.

With this adjustment the Commission seeks to prevent undue crowding out effects on smaller traditional supplying origins, and therefore, ensure the availability to Union users of volumes from these origins. On the other hand, the 15% cap would continue allowing the most affected exporting countries to continue exporting relevant amounts free-of-duty substantially above their historical levels, which were in some cases non-existent. Furthermore, it would allow Union users sufficient diversity of origins. Lastly, considering the consistent past performance of other countries under the residual TRQ, the Commission considers that it is reasonable to assume that the residual TRQ in this category will continue to be fully used.

#### **4.C Update of the list of WTO developing country members excluded from the scope of the measure based on their most recent level of imports**

Following the adoption of the definitive safeguard measure, the Commission committed to reviewing, on a regular basis, the list of developing countries excluded from the scope of the measure based on updated import statistics.

The Commission updated the list of exclusions from the measure based on 2023 (full year) import data. The results of this analysis are presented in **Annex II** to this Notification.

#### **4.D Level of Liberalisation**

The current rate of liberalisation is 4%. The Commission proposes to reduce the liberalisation rate to 1% in order to ensure the effectiveness of the measure (**Annex III**).

Data shows that the liberalisation rate in the past has largely outpaced the evolution of consumption. While TRQs have been increased by almost 25% since the measure was imposed (including the 5% top-up applicable since February 2019), consumption decreased by -17% over the same period. These opposing trends have therefore significantly widened the gap between the level of TRQs and the market demand.

The steel market has shown clear signs of deceleration according to the outlooks assessed.

Therefore, in view of the recent negative trends and outlook on steel consumption in the world and the Union steel market and the fact that TRQs were widely available across product categories, the Commission considered that it is not in the Union interest to increase further the current large gap between the pace of TRQ volume increase and that of steel consumption.

Together with other adjustments presented in this Notification, this rate of liberalisation will contribute to improving the effectiveness of the measure in a period where the Union market is suffering significant import-driven tensions, caused by the negative effects of overcapacity and the resulting responses to it across the world, in a context of weak demand. Union users will continue to have sufficient free-of-duty volumes available under existing TRQs.

### **5. Proposed date of introduction of the measure**

The proposed extension of the safeguard measure, if adopted, will come into effect on 1 July 2024.

### **6. Expected duration of the measure**

The expected duration of the proposed prolongation of the safeguard measure is two years, until 30 June 2026<sup>2</sup>.

---

<sup>2</sup> 30 June 2026 at 23h59, Brussels time.

**7. Expected timetable for progressive liberalization of the measure**

The measure will continue being progressively liberalized, at regular intervals, at the beginning of each period of application. The rate of liberalisation foreseen in the proposed prolongation of the measure is an increase of the TRQ volume by 1% yearly.

**8. If the notification relates only to a finding of serious injury or threat thereof, and does not relate to a decision to apply or extend a safeguard measure**

Not applicable.

**9. Information relating to exporting members**

**i. The major exporting Members of imports of the product involved.**

The main exporting countries of the product concerned are the following: Türkiye, India, People's Republic of China, Republic of Korea, Chinese Taipei and Viet Nam.

**ii. Developing countries excluded**

The list of developing countries that will continue being subject to the safeguard measure is Attached as **Annex II**.

**10. Invitation for consultations**

Consistent with Article 12.3 of the Safeguards Agreement, the European Union is prepared to consult with those Members having a substantial interest as exporters of the product concerned, with a view to exchanging views on the measure proposed.

Consultations will take place, either in person in Brussels (Belgium) at the Commission premises, or on a virtual setting, from **Wednesday May 29<sup>th</sup> until Monday June 10<sup>th</sup>**.

Members wishing to engage in consultations should directly contact either the European Union Delegation in Geneva or the Commission at:

[TRADE-SAFE009-REVIEW@ec.europa.eu](mailto:TRADE-SAFE009-REVIEW@ec.europa.eu)

Members should indicate in their email at least two different time slots for the consultations and, if possible, provide the names and email addresses of the participants.

**11. Members are encouraged to attach, in an electronic form, publicly available document(s) containing the relevant decision(s) made by the competent authority.**

Not applicable at this stage.

**ANNEX I****List of product categories subject to the investigation**

<b>Product Number</b>	<b>Product category</b>
1	Non Alloy and Other Alloy Hot Rolled Sheets and Strips
2	Non Alloy and Other Alloy Cold Rolled Sheets
3.A	Electrical Sheets (other than GOES)
3.B	
4.A	Metallic Coated Sheets
4.B	
5	Organic Coated Sheets
6	Tin Mill products
7	Non Alloy and Other Alloy Quarto Plates
8	Stainless Hot Rolled Sheets and Strips
9	Stainless Cold Rolled Sheets and Strips
10	Stainless Hot Rolled Quarto Plates
12	Non Alloy and Other Alloy Merchant Bars and Light Sections
13	Rebars
14	Stainless Bars and Light Sections
15	Stainless Wire Rod
16	Non Alloy and Other Alloy Wire Rod
17	Angles, Shapes and Sections of Iron or Non Alloy Steel
18	Sheet Piling
19	Railway Material
20	Gas pipes
21	Hollow sections
22	Seamless Stainless Tubes and Pipes
24	Other Seamless Tubes
25A	Large welded Tubes
25B	Large welded Tubes: others
26	Other Welded Pipes
27	Non-alloy and other alloy cold finished bars
28	Non Alloy Wire
